STD Services at Family Planning and STD Clinics in ADAMS County

In Adams County, the health care choices rest primarily on the few private physicians in Ritzville (pop. Approx. 2,000) and Othello (pop. Approx 5,000). In addition, a federally-subsidized community health clinic in Othello—Columbia Basin Health Association (CBHA)—targets migrant farm workers and other low-income residents of this rural agricultural area. CBHA is a participant in the Infertility Prevention Project, a statewide, federally-funded chlamydia screening project, but there are no specific area clinics for comprehensive STD and family planning services. Migrant health clinics reported the greatest number of STD cases in 1999.

 (Clinic held in Lewiston, Idaho in conjunction with North Central Idaho Health District.)

STD Services at Family Planning and STD Clinics in ASOTIN County

Asotin County borders Nez Perce County, Idaho. The Asotin County Health District contracts with Nez Perce County so that Asotin County residents asking the health department about STD services can be referred to Lewiston, ID (in Nez Perce County). Lewiston is far closer than the nearest larger city in Washington, Walla Walla. The funds provided by the Asotin County Health Department do not adequately cover the cost of services. The arrangement between the two local governments has been threatened after a vote to reduce vehicle excise taxes decreased funding to Washington local health departments. Most STDs reported in Asotin County residents in 1999 were diagnosed at STD clinics outside of Asotin County.

NUMBER OF PUBLIC HEALTH STD CLINICS: (1993): 2 (1999): 2 (Benton-Franklin Health District – 1 clinic also in Franklin County.)

STD Services at Family Planning and STD Clinics in BENTON County

Family planning services in Benton County are provided by Planned Parenthood in Kennewick. Benton County has STD clinics in Kennewick and Richland. The Benton-Franklin Health District provides these services with a total of 2 full time nurses who staff a clinic in Pasco as well as those in Kennewick and Richland. One of the health district nurses works part time as a disease intervention specialist (DIS) who works with Planned Parenthood to assure sex partners of infected individuals are notified of their exposure. Planned Parenthood reported the greatest number of STD cases in Benton County in 1999.

When staffing shortages forced the Benton-Franklin HD to stop providing STD services on site from June 1999 to March 2000, clients seeking STD services were referred to the Planned Parenthood clinic in Kennewick. The Health District is struggling to determine if they can continue to provide clinical services or if they need to close their clinics because of funding cuts brought about by Initiative 695 which was passed in November 1999.

STD Services at Family Planning and STD Clinics in CHELAN County

Family Planning Association of Chelan-Douglas Counties (FP of Chelan-Douglas) provides family planning services for both Chelan and Douglas counties from its clinic in Wenatchee. STD services are provided by the Chelan-Douglas Health District, which is also located in Wenatchee. There is a good line of communication between the two agencies, and the Health District laboratory carries out syphilis testing for the Family Planning clinic.

The synergy that can be achieved when health department and clinical providers work together is shown by the following: of 1,019 women tested at FP of Chelan-Douglas in 1999, 38 (3.7%) were positive for chlamydia; 5 of the 29 women tested at the Health District (17.5%) were positive.

When people know they are at risk for STD, they can be tested at the health district. Without serving great numbers of clients, the health district can diagnose STDs among people who know they are at risk. Many STDs, including chlamydia, do not show any symptoms, and people often do not suspect they are infected. When women (and men) visit FP of Chelan-Douglas for family planning services they are also tested for chlamydia. As a result, many people who would have never been tested for chlamydia are diagnosed and treated.

STD Services at Family Planning and STD Clinics in CLALLAM County

Family planning services in Clallam County are provided by an independent Title X recipient, Family Planning of Clallam County. There has not been an STD clinic in the county for over 15 years. The health department and the FP provider team up to obtain funding for male testing conducted at local doctor's offices. Family Planning of Clallam County is also providing Chlamydia screening at the Clallam County juvenile detention center. The family planning clinic reported the greatest number of STDs in 1999.

*Have combined previously separated STD and Family Planning clinics.

STD Services at Family Planning and STD Clinics in CLARK County

Clark County borders Oregon, and largest city in Clark County, Vancouver, is directly across the river from Portland, OR. Southwest Washington Health District serves Clark and Skamania counties. The Health

District had to close the reproductive health clinic (providing STD and family planning services together) that was located in one of the neediest parts of Vancouver. One health district clinic and one Planned Parenthood clinic remain operating in Vancouver. Funding reductions as a consequence of Initiative 695 resulted in reduction of one full time nurse from the reproductive health clinic.

The Vancouver Planned Parenthood clinic is part of Planned Parenthood of Columbia-Wilamette. It is the only clinic in that agency that is located in Washington State. There has been considerable management and staff turnover at this Planned Parenthood clinic, but when they are operating, they have a good relationship with the health district. Planned Parenthood relies on the health district to follow up on patients who will not return to the clinic for treatment and for patients whom Planned Parenthood is unable to locate. The staff person who performs these duties is partially funded by federal monies.

STD Services at Family Planning and STD Clinics in COLUMBIA County

There are no clinics in Columbia County that specialize in reproductive health services. Indeed there are few health care providers at all. Columbia reports only a handful of chlamydia cases a year. Invariably, the cases are all females, and all were diagnosed in clinics outside the small, rural county. Columbia County's seasonal influx of migrant agricultural workers used to have access to a part-time branch (of Yakima Valley Migrant) clinic, but even that was discontinued several years ago. The area is underserved, and the few female chlamydia cases reported each year should not be taken as a comforting sign that little STD incidence exists. More likely, there are some asymptomatic males who are infected and serving as a reservoir for continued spread of chlamydia.

STD Services at Family Planning and STD Clinics in COWLITZ County

Cowlitz County Health Department provides STD clinical services one half day per week. Prior to implementation of Initiative 695, the clinic was open three half days per week. Cowlitz Health District works with Cowlitz Family Health Center, the family planning provider in the county, to assure partners of STD cases are contacted and treated to prevent further transmission of STDs. The health district also follows up on untreated clients of Cowlitz Family Health Center. Cowlitz Family Health reported the greatest number of STDs in Cowlitz County in 1999.

 (Northeast Tri-County Health District –
 STD patients seen at Family Planning clinics
 in Ferry, Pend Oreille and Stevens counties.)

STD Services at Family Planning and STD Clinics in FERRY County

In the three northern-most counties in the region, known collectively as the Northeast Tri-Counties, local public health administers family planning services. A slightly larger private medical community than most rural counties in the region, Indian Health Service clinics on the Colville Indian Reservation, and several small, scattered community health clinics provide better opportunity to access STD-related services than most rural locations in Eastern Washington. However, the overwhelming ratio of about 8 or 9 female cases of chlamydia reported for every male case, speaks of a similar need in Ferry, Pend Oreille and Stevens counties for screening and other forms of intervention to reduce the asymptomatic males who fuel the chlamydia epidemic statewide. As in so many other rural counties, such services are not yet affordable. The Northeast Tri-Counties are trying hard to maintain current services while several public health positions have already been cut due to recent revenue losses.

 (Benton-Franklin Health District – 2 clinics
 also in Benton County.)

STD Services at Family Planning and STD Clinics in FRANKLIN County

STD services are available at the Benton-Franklin Health District in Pasco. There are no family planning providers in Franklin County; the closest clinic is in Kennewick (Benton County). The health district may eliminate STD clinical services as a result of funding cuts associated with Initiative 695. There is a part-time, federally-funded disease intervention specialist (DIS) at the health district who helps followup on cases diagnosed among Benton and Franklin residents. Follow up includes completing required case reports, assuring infected individuals receive treatment, and notifying sex partners of infected individuals of their exposure. Most STD cases among Franklin County residents that are diagnosed within the county are from migrant health clinics. Franklin County residents often seek family planning services in Benton County, where their STDs are diagnosed.

STD Services at Family Planning and STD Clinics in GARFIELD County

Only a few cases of chlamydia are reported in Garfield County each year. The cases are always among females, never males. All are diagnosed outside the county: usually in Walla Walla, Spokane or Lewiston, Idaho. Rural and sparsely populated, Garfield County has no family planning or STD services and few medical practitioners of any kind. Limited access to health care may explain why there are so few reports of disease from this county.

STD Services at Family Planning and STD Clinics in GRANT County

There are no STD services available at the Grant County Health District. Referrals are made to private providers in the community and Family Planning Services of Grant County. The role Family Planning of Grant County plays in providing STD services is substantial. Two clinics in Grant County are part of a federally-funded, state administered chlamydia screening project. FP or Grant County tested more than five times as many males as the primary care clinic that is part of the project (40 vs. 7 males tested). Although the primary care clinic tests more than twice as many females as the FP clinic (1,006 vs. 405), only 40% more chlamydia cases are diagnosed at the primary care clinic (31 at primary care vs. 22 at FP).

STD Services at Family Planning and STD Clinics in GRAYS HARBOR County

Grays Harbor County Public Health and Social Services Department provides STD and family planning services at separate clinics in the health department location in Aberdeen. Over time, the number of STD cases diagnosed in the FP clinic vs. the STD clinic is about even, with 31 chlamydia and gonorrhea cases diagnosed in the FP clinic in 1999 and 37 cases diagnosed in the STD clinic. There are no other FP providers in Grays Harbor County. The health department reports most of the STD cases in Grays Harbor.

STD Services at Family Planning and STD Clinics in ISLAND County

Planned Parenthood of Western Washington operates two clinics in Island County: a teen clinic in Clinton at the southern part of the island and a "regular" clinic further north in the main population center of Oak Harbor. Island County Health Department began contracting with North Whidbey Community Clinic for STD services in 1995. Although the health department no longer has funds for STD services, North Whidbey Community Clinic in Oak Harbor continues to provide low cost STD screening. The same organizers opened South Whidbey Community Clinic in Clinton in 1999. The Planned Parenthood and Community Clinics participate in the Infertility Prevention Project: a federally-funded chlamydia screening project. There is a naval air station in Oak Harbor, and most cases of STD in the county are reported by the Navy.

STD Services at Family Planning and STD Clinics in KING County

Seattle, the largest city in Washington State, is the county seat for King County. The local health jurisdiction in King County supports one of the top STD research and clinical facilities in the nation: the Harborview Medical Center STD Clinic. In addition, the health department operates eight reproductive health clinics throughout the county. These clinics serve populations with some of the highest rates of chlamydial infection in the state.

Planned Parenthood of Western Washington operates seven clinics in King County. Planned Parenthood provides the health jurisdiction with contact information of patients who will not return to the clinic for treatment or who request assistance with notifying their partners of their infections.

There are more health care providers in King County than any other county in the state. The health jurisdiction has received additional funding recently to work with all providers who diagnose STDs to assure their patients are treated and patient's partners are notified. It is unlikely the federal funds for these enhanced activities will continue indefinitely. Some federally-funded disease intervention specialists will likely continue to be located at King County.

*(Have combined previously separated STD and Family Planning clinics, now known as Reproductive Health.)

STD Services at Family Planning and STD Clinics in KITSAP County

Kitsap County was affected by Initiative 695 on many levels. Local bus service on the Kitsap peninsula was reduced, along with ferry service to Seattle. Most staff at the Bremerton-Kitsap County Health District voluntarily reduced their hours in order to keep as many clinics as possible open, however, the West Park clinic in Bremerton still closed in 1999. Clinics in Bremerton, Poulsbo, Port Orchard and Bainbridge Island remain open with reduced hours. STD and family planning (FP) services are provided at the health district reproductive health clinics.

Planned Parenthood of Western Washington has a FP clinic in Bremerton. It follows the health district and the military (naval station) in reporting STDs. There is a part-time, federally-funded disease intervention specialist (DIS) at the health district who helps follow up on cases from Planned Parenthood, the health district and any other providers. Follow up includes completing required case reports, assuring infected individuals receive treatment, and seeing that sex partners of infected individuals are notified of their exposure.

STD Services at Family Planning and STD Clinics in LEWIS County

There is one family planning clinic in Centralia run by Planned Parenthood of Western Washington. Planned Parenthood diagnoses the largest number of chlamydia cases in the county. Lewis County Health Department had an STD clinic on site in Chehalis but they ceased providing STD services in 1998. The health department refers clients to Providence Hospital in Centralia, and follows up on untreated STD cases and notification of sex partners of exposure to STDs for both Planned Parenthood and the hospital.

STD Services at Family Planning and STD Clinics in LINCOLN County

Rural Lincoln County Public Health coalition, with an office in Davenport (about 40 minutes drive west of Spokane), is similar in many ways to the description given for the small Palouse area counties. There are no Planned Parenthood or STD clinic services in Lincoln County and few medical offices. The county's proximity to Spokane usually means that the few local STD cases reported (mostly female) are generally diagnosed out of county. Financial resources are limited so that the nursing director at Lincoln County Public Health Coalition has difficulty maintaining current services and cannot expand to serve infected males.

STD Services at Family Planning and STD Clinics in MASON County

The Mason County Department of Health Services operates an STD clinic in Shelton, and Planned Parenthood of Western Washington also has a clinic in that city. The two agencies cooperate to provide clinical services to their clients, either separately or together, as in the teen clinic. The health department assures all STD cases are treated properly and their partners are notified of exposure to disease. The family planning clinic reports the greatest number of STDs in the county.

STD Services at Family Planning and STD Clinics in OKANOGAN County

There are no STD services available at the Okanogan County Health District. Referrals are made to local providers and Okanogan Family Planning, an independent family planning clinic that also provides FP services at the community service offices (CSOs) in Okanogan County. Okanogan Family Planning reports the greatest number of STD cases by a single provider in Okanogan County.

STD Services at Family Planning and STD Clinics in PACIFIC County

South Bend and Long Beach both have family planning clinics that are run by the Pacific County Health and Human Services Department. Prevalence of STD in this county is typically low, but chlamydia, in particular, has been increasing over the last two years. Both health department clinics participate in the federally-funded Infertility Prevention Project, a program to screen women for chlamydial infection.

(Northeast Tri-County Health District-STD patients seen at Family Planning clinics in Ferry, Pend Oreille and Stevens counties.)

STD Services at Family Planning and STD Clinics in PEND OREILLE County

In the three northern-most counties in the region, known collectively as the Northeast Tri-Counties, local public health administers family planning services. A slightly larger private medical community than most rural counties in the region and several small, scattered community health clinics provide better opportunity to access STD-related services than most rural locations in Eastern Washington. However, the overwhelming ratio of about 8 or 9 female cases of chlamydia reported for every male case, speaks of a similar need in Ferry, Pend Oreille and Stevens counties for screening and other forms of intervention to reduce the asymptomatic males who fuel the chlamydia epidemic statewide. As in so many other rural counties, such services are not yet affordable. The Northeast Tri-Counties are trying hard to maintain current services while several public health positions have already been cut due to recent revenue losses.

*(Tacoma-Pierce County Health Dept. contracts with community clinics to provide STD services.)

STD Services at Family Planning and STD Clinics in PIERCE County

The family planning and STD clinics at Tacoma-Pierce County Health Department closed in 1996. The health department now contracts with four community-based primary health care agencies to provide STD screening at those clinics. Patients receive vouchers from the health department to receive care at these clinics, however, travel to the clinics can be an obstacle for patients with limited transportation. Eliminating clinical services has allowed the health department to use more resources to assure that diagnosed cases are treated and interviewed, and that their sex partners are notified of their exposure to STDs. Much of this follow up is carried out by three federally-funded disease intervention specialists (DIS).

Family planning services are available in Pierce County through Planned Parenthood of Western Washington sites in Tacoma and Lakewood. The Planned Parenthood and contract clinics collaborate with the state and county health departments to form the Pierce County Family Coalition. The coalition coordinates a variety of activities, including screening for STDs and teaching family planning methods in juvenile detention facilities.

Both Army and Air Force bases are located in Pierce County and the military reports most STD cases in Pierce County.

STD Services at Family Planning and STD Clinics in SNOHOMISH County

Snohomish County is part of the Puget Sound metropolitan area that includes the cities of Seattle, Everett and Tacoma. Everett is the largest city in Snohomish County, north of Seattle, and the Snohomish Health District operates dedicated STD clinics in Everett and the city of Lynnwood. Planned Parenthood of Western Washington provides services in these two cities as well as the smaller communities of Monroe and Arlington. The health district and Planned Parenthood work closely together, the health district providing partner notification or treatment follow up at Planned Parenthood's request, and Planned Parenthood providing the health district with patient information at the health district's request.

The health district funds 1.5 disease intervention specialists (DIS) who conduct testing in correctional and other non-clinical locations and provide training to a broad group of constituents in addition to following up on STD cases from all providers in the county as resources allow.

STD Services at Family Planning and STD Clinics in SPOKANE County

In the city of Spokane, two large Planned Parenthood clinics, several community health clinics, a comprehensive public health STD clinic and several hospitals and private physicians diagnose and treat hundreds of STDs yearly. Planned Parenthood and the health district STD clinic specialize in reproductive health services. Planned Parenthood is the community leader for diagnosing cases of chlamydia in females, though the public health STD clinic leads by far in more comprehensive diagnoses of a broad range of sexually transmitted diseases: especially gonorrhea, herpes, human papilloma virus (HPV), trichomoniasis and, of course, chlamydia.

There is a long tradition of cooperation in Spokane between the Planned Parenthood clinics and the public health clinic involving mutual referrals and courtesy public health follow up on Planned Parenthood patients who may need treatment for chlamydia or gonorrhea. Planned Parenthood is often unable to make telephone or mail contact with some of their patients for notification and/or disease treatment. The health district provides these services for several Planned Parenthood patients every month.

The Spokane Regional Health District has reduced staff, clinic hours and some services in the public health STD and immunization clinics in 2000 due to Initiative 695-related budget cuts.

STD Services at Family Planning and STD Clinics in STEVENS County

In the three northern-most counties in the region, known collectively as the Northeast Tri-Counties, local public health administers family planning services. A slightly larger private medical community than most rural counties in the region, Indian Health service clinics on the Spokane Indian Reservation, and several small, scattered community health clinics provide better opportunity to access STD-related services than most rural locations in Eastern Washington. However, the overwhelming ratio of about 8 or 9 females cases of chlamydia reported for every male case, speaks of a similar need in Ferry, Pend Oreille and Stevens counties for screening and other forms of intervention to reduce the asymptomatic males who fuel the chlamydia epidemic statewide. As in so many other rural counties, such services are not yet affordable. The Northeast Tri-Counties are trying hard to maintain current services while several public health positions have already been cut due to recent revenue losses. Indian health reports the greatest number of STD cases in Stevens County.

STD Services at Family Planning and STD Clinics in WHATCOM County

Whatcom County Health and Human Services Department has an STD clinic and also provides STD education and screening at the juvenile detention center. Mt. Baker Planned Parenthood operates a family planning clinic and a primary care clinic in Bellingham, the largest city in Whatcom County. Mt. Baker Planned Parenthood was the single provider that reported the greatest number of STDs in 1999, followed by the STD clinic.

The health department STD clinic will only be serving adolescents as of January 2001 due to funding cuts caused by Initiative 695.

NUMBER OF PUBLIC HEALTH STD CLINICS: (1993): 0 (1999): 0

STD Services at Family Planning and STD Clinics in WHITMAN County

In Whitman County, the population of the largest town of Pullman is overwhelmingly made up of college students at Washington State University. A branch office of Planned Parenthood of the Inland Northwest offers some STD screening services in Pullman and the student health center at the university screens a significant number of students for chlamydia and gonorrhea. There is a likely gap in this area's STD services for adolescent males as well as adolescent females not eligible for the college health services and/or not utilizing family planning services. Washington State University reported the greatest number of STD cases in 1999.

During the 1990s, Whitman County Health Department attempted, for a time, to address this need and offer STD clinic services in Pullman, but the venture proved too costly, and public health STD services were discontinued after only a short time by the local Board of Health.

STD Services at Family Planning and STD Clinics in YAKIMA County

As of January 1, 1999 Yakima Health District discontinued all STD clinic services. People needing services are referred to other community clinics. Planned Parenthood, through meetings with Health District administration, agreed to accept referrals. The county health district does not reimburse providers for STD services, which has possibly contributed to the slow pace at which community and Planned

Parenthood clinics have moved to offer complete STD services. Other community partners in the area are Yakima Neighborhood Health Clinic and Yakima Valley Farm Workers Clinic. Planned Parenthood reported the greatest number of STD cases in Yakima County in 1999.

Planned Parenthood of Central Washington received a grant from the Centers for Disease Control and Prevention (CDC) to develop interventions to prevent STD and HIV infections among ethnic minority youths aged 15-19. The grant cycle is from 1999-2001 and will be implemented in Yakima County. The intent is to develop interventions that can be used universally by all types of health care providers and schools in the county.
